Leading physical geographers take stock of the state of
their science, urging more inter-disciplinary research
to halt the past trend toward increasing differentiation
of the particular physical-geographic disciplines. The
authors look to greater utilization of geophysical and

DESCRIPTORS: *Direct current, *Electric fields,
Distortion, Model tests, Electrical conductance,
Spheres, Electric potential.

The distortions of the electrical field of direct current
caused by a continuous body are compared with those
caused by a hollow one. By introducing effective con-
ductivity there are given criteria for the equivalence of
distortions. (Author)
